Edwin (Win) Metcalf

New York, NY | (415) 420-4395 | winmetcalf1@gmail.com | edwinmetcalf.com | Github | Linkedin

Education

Vassar College — Computer Science and History | GPA 3.6/4.0 Poughkeepsie, NY (Sept 2022 – May 2026)

- Coursework: Compilers, NLP, Computer Networks, Analysis of Algorithms, Theory of Computation.
- History Thesis: "From Data to Drones: Technology's Role in Sustaining America's Forever Wars"
- Athletics: Varsity Lacrosse (2022-2026), 3 times Liberty League All Academic Team

UC Berkeley, CS Summer Program (Computer Architecture, Computer Security, Software Engineering) Jun–Aug 2025

Experience

RainMaker Capital May 2026 – Present

Software Engineering Intern

- Built and deployed a full-stack investment banking analytics platform: REST API integration with the CRM and automated email workflows for deal tracking and lead generation.
- Developed a business valuation calculator that automates data intake, CRM handoff, and client follow-up. Fixed scoring edge cases and zero-value input validation bugs.
- Saved 1-2 hours of analyst time per client by CRM population and automated pre call note sheet creation. Worked directly with analysts to understand they were using CRM fields to make a note sheet so I went and automated the creation.

MetCode (Open Source) August 2026 – Present

Founder & Maintainer *github.com/Edwin-metcalf/MetCode*

- Created and maintaining an open-source CLI agent optimized for small (7–8B parameter) models running offline on modest consumer hardware. 3+ outside contributors and 5+ stars on GitHub
- Implemented the tool-calling loop including, tool dispatch, tool-result feedback, multi-call handling, and a file-system toolset. Test coverage at 60%+.
- Diagnosed model-specific failures: hallucinated tool names, and a model whose tool calls never parsed due to a template mismatch. Compared models on tool-call judgment and standardized on the best performer

RainMaker Capital Market Analyst Intern Jun 2024 – Aug 2024

- Researched the healthcare technology sector and wrote a stakeholder report on findings

Indie Wine and Beer Bar & SF Wine Center Server Jul 2024 – May 2026

- Managed deliveries and kept accurate inventory records while providing excellent table waiting service to customers.

Projects

Robot Policy Evaluation Platform | *Python, Isaac Sim, LeRobot, PyTorch*

- Built a headless Isaac Sim harness (Franka Panda) to benchmark vision-language-model manipulation tasks, with automated task execution, success/failure logging, and metric collection, using Anthropic API to act as the VLM.
- Extended it to LeRobot simulation, currently run and tested diffusion and VQ-BeT policies on Push-T robot action.
- Ran 100+ evaluations, summarizing and comparing policies on bench marks like Wilson Score Interval and a non binary success metric to determine close misses.

Fan Sentiment Analysis | *Python, Scikit-learn, VADER, NLP*

- Built a Reddit data pipeline and a logistic regression sentiment classifier (VADER features); analyzed millions of posts across seasons to relate team performance to fan sentiment, published as a research paper

Personal Portfolio Site | *TypeScript, Go, PostgreSQL, Heroku* edwinmetcalf.com

- TypeScript frontend + Go backend + Postgres DB. Analyzed 400+ Clash Royale games and 20 most recent Dota2 games
- Matchup analyzer for anyone to put two Clash Royale tags in and get recent game analysis | 50+ entries on global leaderboard for custom space invaders/vampire survivors game
- Custom REST Api built on Go net/http | Debugged multiple game storing by double pass on matchup players with unique identifies based of game time

Secure File Sharing and **Compiler** | *Go, OCaml, RISC-V*

- End-to-end encrypted file sharing in Go (AES-CTR, HMAC, RSA signatures) with access revocation; compiler from recursive-descent parsing and type checking to optimized RISC-V codegen

Skills

Languages: Python, TypeScript/JavaScript, Go, SQL, Java, C, OCaml, Ruby, HTML/CSS, OOP / Functional Programing
ML/Concepts: LLM APIs, tool calling, Networking(UDP/TCP), Ollama, PyTorch, scikit-learn, spaCy, evaluation harnesses
Tools: PostgreSQL, REST APIs, Git, Linux, Heroku, Isaac Sim, LeRobot, Svelte, VS Code, Claude Code
